MEMORANDUM FOR ASSISTANT DEPUTY DIRECTOR FOR SCIENTIFIC AND
TECHNICAL INTELLIGENCE

SUBJECT: Operational Report - Project 8706 (U)

1. (S/SK/WNINTEL) During the course of five sessions conducted against Project 8706, Source 021 and Source 003 provided substantially correlated information on a rectangular building having a steeple, towered structure at its center (SEE TAB A). Source 021 described a series of silver pipes and tall cylindrical objects located in an adjoining area in support of the tower-like building. A rank, acrid and musty, gaseous odor was associated with the cylinders. Both sources alluded to a "cap" and "core" concept associated with the storage of energy at the rectangular building with the tower.

2. (S/SK/WNINTEL) Source 021 identified a second, square-shaped building with distinctive, exposed steel girders. The edifice was either under construction or in a state of repair. The building was located on a sloping surface and gave the appearance of being taller in front than in back. Personnel were apprehensive, even fearful of the structure.

3. C/NF) ORIGINATOR'S COMMENTS;

The information above, was provided in response to tasking involving a comprehensive search problem. Specific issues can be addressed following your review as deemed appropriate. Request you complete and return the attache Intelligence Evaluation Sheet at your convenience.
